HMS Software Services for Microsoft Project

Implementing Microsoft Project across the Enterprise

HMS has been consulting organizations in automating their enterprise project management (epm) environments since 1984. We have worked on many of Canada's most prestigious capital projects over the years and have developed both our own skills and a network of skilled associates who are able to deliver a wide range of project management expertise to organizations.

HMS has been a Microsoft Project Solution Partner since 1995. Our typical mode of consulting is in skills transfer; to transfer our expertise to your personnel as quickly and efficiently as possible so that the benefits continue long after we have left. Our hallmark is a quick return on investment, ensuring that you realize the maximum return on your Microsoft Project system implementation.

Our services include:

Project management assessment

HMS will come into your organization and assess what aspects of your project management environment would most benefit from change and how to best implement a project management structure.

Proof of Concept of epm and MSProject

HMS will assist you in a guided proof of concept to move forward with your implementation of enterprise project management and the use of Microsoft Project. Our analysts will facilitate interviews and guide your organization through determining appropriate objectives will be able to realize in your evaluation of MS Project and in the deployment of enterprise project management methodology.

Pilot Project using MS Project

HMS personnel will assist with a pilot installation of MS Project in order to forward your evaluation of the system. We will install both Project and Project Server, train the pilot project personnel and assist you in configuring the system to match your requirements. We will assist with the definition of the global resource pool, customized enterprise fields, security roles and views.

Integration with corporate systems

Whether it's your ERP financial system or other product systems, HMS can assist in integrating MS Project data to these systems. Our experience in integrating project systems into the enterprise stretches back to 1984.

Installing and configuring

Microsoft Project for enterprise use

HMS will assist your organization with the installation and configuration of Microsoft Project Standard and Professional and in taking advantage of the many new features available in MS Project.

Installing and configuring Project Server for enterprise use

We can also assist your organization in the installation and implementation of one of MS Project's strongest aspects, Project Server, a collaborative tool for Microsoft Project environments that brings the enterprise together. We can assist with the definition of your system including resources, project portfolios and customized enterprise views as well as helping to define the enterprise project management processes

Microsoft Project training

HMS has extensive skills in providing training for project management environments. We can provide on-site training for your project team on a variety of subjects including:

- Fundamentals of Project Management
- Microsoft Project Team Member course
- Microsoft Project course for Professionals
- Microsoft Project Resource Manager course
- Microsoft Project Server Administrator course

HMS Software Services for Microsoft Project

About HMS Software

HMS Software, a division of Heuristic Management Systems Inc., is a wholly Canadian-owned company headquartered in Montreal with additional offices in Toronto, Canada. Since its inception in 1984, HMS has specialized in the automation of project control environments. Its commitment is to provide project management solutions to organizations worldwide.

Founded as a consulting firm, HMS Software has maintained its technical orientation throughout the years. Staff in all areas of the organization, from Marketing to Technical, have in-depth knowledge of project management and the enabling technologies that make our automated solutions possible. HMS's offerings include project management software, training, consulting and technical support.

In 1993, HMS Software launched **TimeControl**[®], a project-oriented timesheet system designed for organizations that need to track project labor hours. TimeControl is now being used by major corporations worldwide.

HMS has been a Microsoft Project Solution Partner since 1995. Our technical and development staff are given early access to new releases of MS Project so we can ensure that TimeControl is ready to link to the latest version and that our technical staff is ready to assist you as soon as a new version has been released.

Through its offices in Canada and a network of agents and distributors throughout the world, HMS Software is able to provide technical expertise, high-quality consulting and training and, of course, software to project organizations worldwide.

HMS Software is proud to count among its clients some of the world's major corporations including: Acergy, Alcan, the Atlanta Airport, The Canadian Business Development Bank, John Deere, Kelly Services, Lockerbie and Hole, Organon, Standard Life, Toronto Transit Commission, Transcontinental Printing, Volvo Novabus and hundreds of others.

HMS Software can get your organization up and running with Microsoft Project on the fast track.

Problem: Your organization has used Microsoft Project for a long time but usage is restricted to desktop use only. Users work on their own and project data is not shared.

Solution: Let HMS install and configure MS Project and Project Server as an enterprise installation and start seeing project data together.

Problem: Your projects are consistently short of resources and your forward-looking resource analysis doesn't look across all projects.

Solution: Let HMS install Project Server and create a global resource pool. Then we'll show you how Microsoft Project Professional can resource analyze across the entire enterprise including creating teams from only available resources and skill scheduling.

Problem: Management has no multi-project perspective of the organization.

Solution: HMS can assist you at setting up Microsoft Project Professional and Microsoft Project Server to bring project data together. Then use the Portfolio functionality of Project Server to see all project data at a management level.
